Returns & Refunds Policy — Internal Support Reference

This document defines the RULES for returns and refunds (windows, eligible categories, refund methods, exclusions). It does NOT contain the status of any specific customer order. To determine whether a specific order qualifies, the agent must combine these rules with the order's actual state (purchase date, category, prior return activity) from the Returns structured database (see `returns_refunds_schema.sql`). Policy → apply to order facts → decision.

Document version 2.4 | Last policy review: May 2026 | Internal use — Support & Training

1. Standard Return Window

The standard return window is measured from the delivery date (not the order date). A return request must be initiated within the window; the item does not need to reach the warehouse before the window closes, only the request needs to be logged.

Category	Return window	Condition required
Earbuds / Audio	10 days from delivery	Unopened, or opened with all accessories and original packaging
Smartwatch	15 days from delivery	No visible wear on band/strap; screen protector removal is allowed
Speakers	10 days from delivery	Unopened, or opened with all accessories and original packaging
Accessories (stands, cables, etc.)	7 days from delivery	Unused, original packaging intact
Keyboards	15 days from delivery	No hot-swapped/modified switches (voids return eligibility, see Section 4)

2. Refund Methods & Timelines

Refund method is determined by the original payment method and cannot be changed by the customer at request time except for the wallet-credit fast-track option described below.

Original payment method	Refund method	Processing time after item received
Credit/Debit Card	Refund to original card	5-7 business days
UPI / Net Banking	Refund to original source	3-5 business days
Cash on Delivery (COD)	Bank transfer (customer provides account details) or wallet credit	7-10 business days (bank transfer); instant (wallet credit)
Aurora Wallet balance	Refund to Aurora Wallet	Instant upon return approval
Any method — fast-track option	Aurora Wallet credit (customer opt-in)	Instant upon return approval, +5% bonus credit

3. Return Reasons & Category Rules

Return reason	Eligible for refund?	Eligible for replacement?	Notes
Defective / not working	Yes	Yes (preferred)	No return window restriction if within warranty period
Wrong item shipped	Yes	Yes (preferred)	Prepaid return label always provided, no return window restriction
Changed mind / no longer needed	Yes	No	Standard category return window applies (Section 1)
Found cheaper elsewhere	Yes	No	Standard category return window applies; price-match not offered
Damaged in transit	Yes	Yes (preferred)	Must be reported within 48 hours of delivery, photo evidence required
Ordered wrong size/variant	Yes	Yes	Standard category return window applies

4. Non-Returnable Conditions & Exclusions

The following conditions make an order item ineligible for return regardless of remaining window time. These are checked against order/item facts, not against the policy document itself.

Condition	Applies to
Item already marked RETURNED for this order line	All categories
Keyboard switches hot-swapped by customer (switch warranty void)	AuroraType K5 only — electrical/PCB return still allowed if defective
Speaker water-damage claim without confirmed ingress (cosmetic wear only)	AuroraSound Go
Order marked CANCELLED (nothing to return — refund handled at cancellation, not return, flow)	All categories
Return window elapsed AND reason is not 'Defective' or 'Damaged in transit'	All categories
Gift-wrapped promotional bundle where only one component is being returned	All categories — route to human agent for partial-bundle assessment

5. Return Process Steps (for agent-generated customer replies)

1. Customer requests return → agent verifies eligibility (window + condition, via structured lookup). 2. If eligible: agent generates a prepaid return label/pickup slot and creates a RETURN_INITIATED status on the order. 3. Item received at warehouse → quality check (2-3 business days). 4. Refund processed per Section 2 timelines, or replacement dispatched. 5. If NOT eligible per Section 4, agent explains the specific exclusion reason (not a generic denial) and offers escalation to a human agent if the customer disputes the assessment.

Escalation trigger: any return request involving a claimed defect on an item outside the standard window, or a dispute about condition assessment, should be escalated to a human agent rather than auto-denied — the agent should not make subjective judgment calls about physical item condition from a text description alone.
